

CEWELD 410 NiMo

TYPE Solid stainless steel wire for joining and cladding.

APPLICATIONS CEWELD® 410NiMo is used for welding similar martensitic and martensitic-ferritic steels in various applications such as water turbines, compressor construction, steam power plant construction, continuous casting rolls, centrifuges, valves, Pelton and Francis turbines.

PROPERTIES CEWELD 410NiMo has comparable properties to steels of the same or similar types. It is resistant to water and steam.
The preheating and interpass temperature should be 100 - 160°C for thick-walled parts.
The heat input should be max. 15 kJ/cm. Annealing at 580 - 620°C is possible.
